

Project 2: Creating your Business Model

Project Description:

Use the case study material as a requirement. We will concentrate on developing your object model (Business Model) and persistence layer that we will use for upcoming projects. We will create services on top of the business model that you are generating in this project.

Supporting documents:

- Use the layered architecture diagram that we discussed in class.

Project Expectation:

- Group executed project
- Modeling your Business (Creating your Business and Persistence Layers) – for persistence ORM or direct JDBC call can be used even though ORM is preferred.
- Preparing the domain model functionalities that will be used for exposing services.

Project Submission and Grading:

- 15% of total grade.
- For source code and configuration files point me to the repository you have your solution (Git?).
- Detailed documentation of your architecture and implementation.

Project Due Date:

- EOD Oct 2nd , 2017
